

WatchMe: User manual

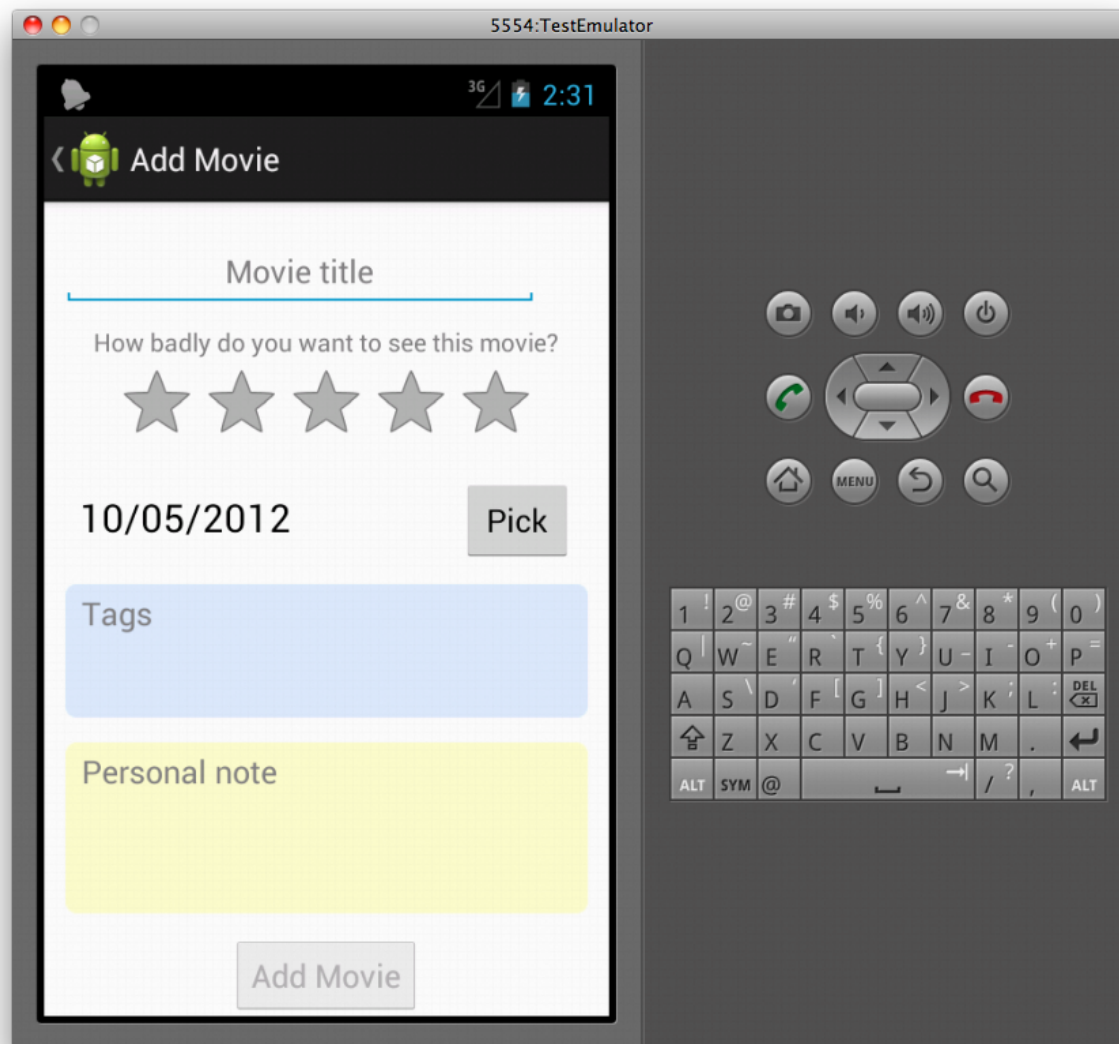

Hi, and welcome to WatchMe! Here you can add movies that you want to see to a list, set a date when you want to see it, and get a reminding notification when it's time to purchase a cinema ticket! Here is a guide to help you get started.

When you start the app you will see your list of movies. Since this is the first time we use it, no movie has been added, and thus no movie will be displayed.

First view in WatchMe.

To add a new movie, press "ADD MOVIE" in the top right corner of the screen to get to the "add movie"-view.

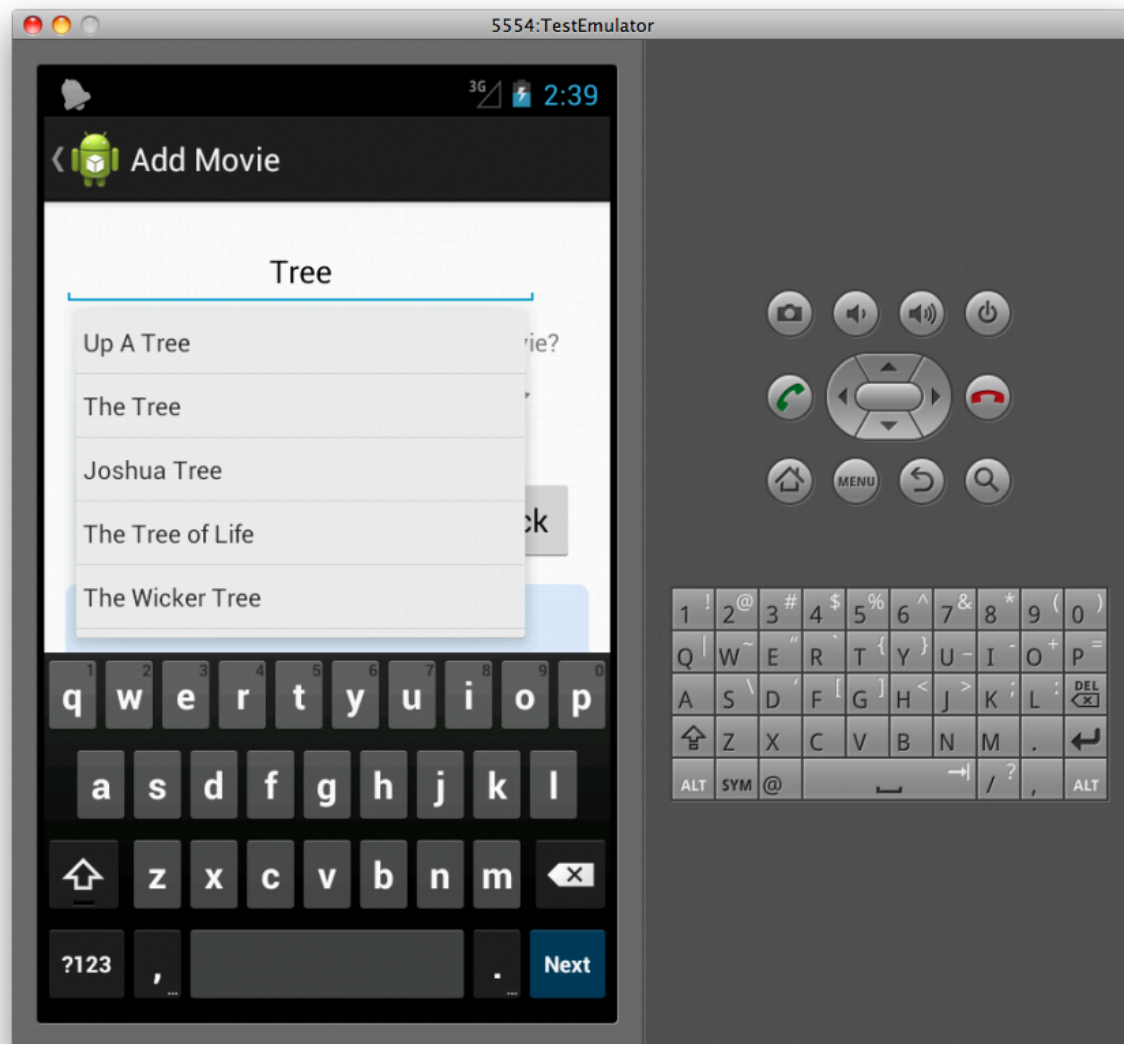

Add movie-view.

In “Add movie” view, press the “Movie title” text field to specify the title on the movie you would like to add. If you input some letters, an auto-complete function will kick in to help you.

Use the stars to give the movie a rating describing how badly you want to watch the movie.

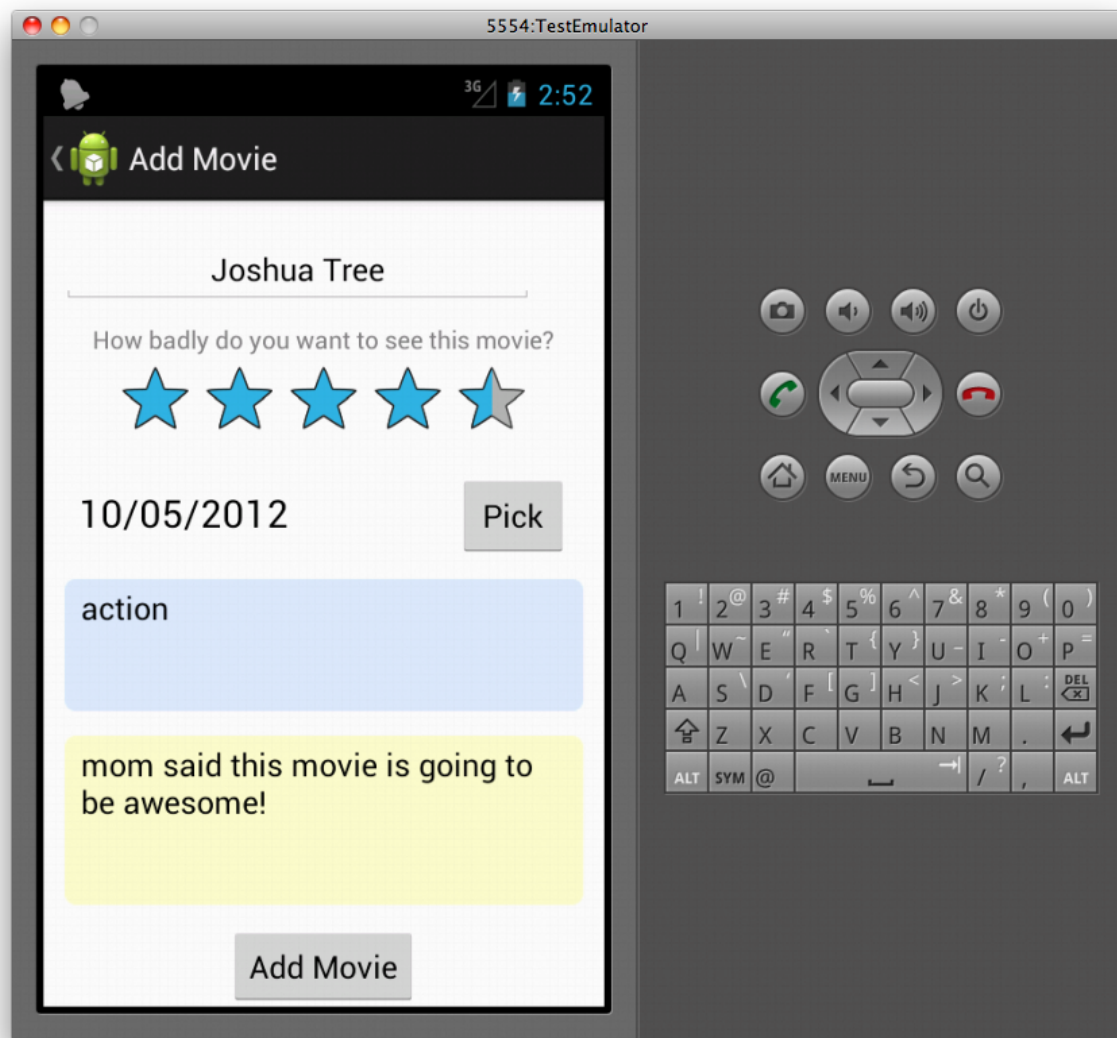

Below the stars is a field where you can pick a date. On this date WatchMe will remind you with a notification. If you for example pick the date when the movie will be shown in theaters you will get a notification that day, and won’t forget to buy your theater tickets.

You are also able to add tags to your movie. These are used to categorize your movies. If you for example add the tag “Action” you will later on be able to view this movie in a list with other “Action” tagged movies.

Auto-complete function.

Last but not least there's a possibility to write a personal note that will be attached to this movie. When you're done, press "Add movie"-button and your movie will be added to your list of movies.

Press "Add Movie" and movie will be added to list

And now, tadaa! In your list you will find the movie!
